Publication No. US20040053288A1
GENERAL INFORMATION:
APPLICANT: YAMAMOTO, Shigeto
APPLICANT: YAMAMOTO, Kozo
APPLICANT: YAMAMOTO, Kozo
APPLICANT: TARGAMI, Hakuo
ITILE OF INVENTION: Method for estimating therapeutic efficacy of tumor necrosis
TITLE OF INVENTION: Accor
FILE REFERENCE: YAMAI=3
CURRENT FILING DATE: 2003-04-19
PRIOR APPLICATION NUMBER: US/10/409,107A
CURRENT FILING DATE: 2002-04-09
PRIOR FILING DATE: 2002-04-09
NUMBER OF SEQ ID NOS: 100
                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         OTHER INFORMATION: Description of Artificial Sequence: Forward Primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Publication No. US20040102389A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Baccobedo, Dan
APPLICANT: Secobedo, Jaime
TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Rely
TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor
FILE REFERENCE: MBHB00-876-N (400/049)
CURRENT APPLICATION NUMBER: US/10/287,949A

CURRENT FILING DATE: 2003-04-11

NUMBER OF SEQ ID NOS: 20822
SOFTWARE: Patentin version 3.0

SEQ ID NO 6730

Publication No. US20030092114A1

GENERAL INCRMATION:

APPLICANT: Luche, Ralf M.

TITLE OF INVENTION: DSP-18 DUAL-SPECIFICITY PHOSPHATASE

FILE REFERENCE: 201225.436

CURRENT APPLICATION NUMBER: US/10/151,320

CURRENT FILING DATE: 2002-05-16

NUMBER OF SEQ ID NOS: 42

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 26

APPLICANT: Chris Somerville

```
Sequence 23, Application US/09891517

Sequence 23, Application US/09891517

Patent No. US20020106653A1

GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: KANAGARA, TAKAHIRO
APPLICANT: KANAGARA, TAKAHIRO
APPLICANT: YORIMURA, MASAKI
APPLICANT: YORIMURA, YORIMURA
APPLICANT: YOROMAKU, TOYOKARAI
APPLICANT: YOROMAKU, TOYOKARAI
APPLICANT: YOROMAKU, TOYOKARAI
APPLICANT: YOROMAKU, TOYOKARAI
APPLICANT: NOVEL NUCLEIC ACID PROBES, METHOD FOR DETERMINING CONCENTRATIONS
TITLE OF INVENTION: NUCLEIC ACID BY USING THE PROBES, AND METHOD FOR ANALYZING DATA
TITLE OF INVENTION: WETHOD
FILE REFERENCE: 210352US-1994-163-0-X
CURRENT APPLICATION NUMBER: US/09/891,517
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                           TITLE OF INVENTION: Production of Hydroxylated Fatty Acids in
Genetically Modified Plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
